

Horus Mini

Time & Attendance with Facial Recognition

Overview

The Horus Mini takes touchless biometrics to the next level by using advanced recognition algorithms and the latest computer vision technology to recognize faces against a large capacity database at high speed.

By using Visible Light Facial Recognition the recognition distance has been greatly extended up to 3 meters which significantly improves the maximum traffic rate and overall user experience. The ZKTeco facial recognition algorithm also supports a 30-degree pose angle facial recognition to make a proactive recognition a reality.

These products are also equipped with a powerful anti-spoofing ability against almost all types of fake photos and videos attacks.

Overview

The Rainshield protects your device from harsh weather and sunlight tarnishing the outer materials. The Rainshields and backboxes are made from mild steel and powder coated with black but the powder coating color can be changed on request.

The Backbox fits inside the rainshield and allows for neat and adequate cable management. Devices without a IP rating to go outside does not have a rainshield.
